Usability engineering: process, products and examples - contents

Part 1: Introduction to Usability

Chapter 1. What Is a User Interface?
Section 1.1. Introduction
Section 1.2. Common Objects and What We Can Learn from Them
Section 1.3. How Do Users Know What to Do with an Interface?
   Perceptibility of salient cues from the interface
   User models of devices
   Designing aggravating interfaces
   How do we know that our mental model fits the device?
Conclusions
Exercises

Chapter 2. What Do We Mean by Human–Computer Interaction, Usability, and User Interfaces?
Section 2.1. What Do We Mean by Human–Computer Interaction?
Section 2.2. What Factors Influence the Success of a User Interface?
Section 2.3. Who Is Qualified to Participate in Human–Computer Interaction?
Section 2.4. Why Is There Interest in Usability and User Interfaces Now?
   Changes in hardware environments
   Changes in user characteristics
   Changes in software environments and applications
   More history of human-computer interaction
Section 2.5. Human–Computer Interaction Grows Within the Computer Science Field
Section 2.6. The Context of Human–Computer Interaction
Section 2.7. The Process of Usability Engineering
Section 2.8. Why Is Usability Engineering Difficult?
   How do we guarantee usability?
Section 2.9. Where Are We Going?
Conclusions
Exercises

Chapter 3. Defining Usability and Models of Usability
Section 3.1. Introduction: What Exactly Does Usability Mean?
Section 3.2. Shackel's Model of Usability
Section 3.3. Nielsen's Model of Usability
Section 3.4. Eason's Model of Usability
   System (UI) characteristics
   Task characteristics
   User Characteristics
   An illustration of Eason's model
   Does any evidence support the Eason model?
Section 3.5. A Note About Causality and Usability Models
Section 3.6. Our Model of Usability
   Situational variables: task
   Situational variables: user
   User Interface (System) variables
Section 3.7. What Do You Do with a Model of Usability?
Section 3.8. Applying Our Model: An Audio Catalog
   Assessing task characteristics
   Assessing user characteristics
   Assessing user interface characteristics
   Now what?
Section 3.9. Conclusions About Measurements
Section 3.10. What Parts of the System Have to Be Usable?
Section 3.11. Usability Characteristics and the User Interface
Conclusions
Exercises
Part 2: The Process of Usability Engineering

Chapter 4. The Process of Usability Engineering

Section 4.1. User Interface and Software Development

Section 4.2. User Interface and Special Challenges to Software Development

Section 4.3. The Process of Development

Section 4.4. Software Life Cycle

- Systems engineering and analysis
- Software requirements analysis and specification
- Software design
- Coding
- Testing
- Maintenance
- Guessing game
- Issues for the waterfall model
- Some problems with the waterfall model

Section 4.5. Building a Model That Includes Usability Engineering

Section 4.6. Methodologies, Models, Notations, and Mechanics

- Methodologies
- Models
- Notation
- Mechanics

Section 4.7. The Development Team

- Team structure

Section 4.8. How Involved Are the Users?

Conclusions

Exercises
Part 5: Revisiting the Process

Chapter 10. Prototyping Your Interaction

Section 10.1. Why Discuss Prototyping Here?

Section 10.2. Introduction to Prototyping and Iterative Design

Design

Section 10.3. Steps for Prototyping: The Prototyping Life Cycle

Lifecycle

Section 10.4. Advantages to Prototyping

Section 10.5. How Extensive or Complete Should the Prototype Be?

Section 10.6. Styles of Prototypes

- Low-fidelity prototype
- High-fidelity prototype
- Horizontal and vertical prototypes
- Wizard of Oz prototypes

Section 10.7. Conclusions About Prototypes and Prototyping

Section 10.8. Tools for Interface Construction and Version 0 Prototypes

- Event-Driven programming languages
- Specific user interface management system and dialogue management
- Toolkits
- User interface management system and dialogue management

Conclusions

Exercises

Chapter 11. Usability Assessment

Section 11.1. Introduction

Section 11.2. Evaluation Is a Process

- What steps are part of the evaluation process?
- When should usability assessment be performed during development?
- Analytic, by experts, or by users?

Section 11.3. Getting Started: The Process

- What are the steps in the process?

Section 11.4. When to Evaluate?

- Formative evaluation
- Summative evaluation
- Connection between the type and the time of the evaluation

Section 11.5. What Kind of Evaluation?

- Analytic evaluation
- Evaluation by experts
- Evaluation by users: User testing
Performance measurements
Subjective measurements
Observational measurements
Users as informed participants

Conclusions
Exercises
Part 7: Context, Constraints, and Responsibilities for User Interface Design

Chapter 14. The Human in Human–Computer Interaction

Section 14.1. Introduction
Section 14.2. The Person as an Information Processor
Section 14.3. Human Input/Output
  Attention
  Insights about human input/output
  Text and human-computer interaction
  Hearing and audition
  Touch
  What about smell and taste?
  What about Output? Fitts' law
Section 14.4. Memory and Storage
  Sensory memory
  Short-term memory
  Working memory
  Long-term memory
Section 14.5. Thinking Processes
  What is thinking?
  Problem solving
  Decision making
  Reasoning
Conclusions
Exercises

Chapter 15. Usability for Everyone

Section 15.1. Introduction
Section 15.2. Universal Access as a Matter of Law in the United States
Section 15.3. Diversity of Users
  Usability for users with disabilities
  Usability for the elders
  Usability for children
  Usability and gender
Section 15.4. Real Strategies for Universal Usability
  To work with in the context of established infrastructure to promote universal usability
  To use good engineering practice
  To design for a diverse audience
  To use and accommodate a wide variety of technologies
Section 15.5. Universal Usability and the Marketplace
Section 15.6. Why Now?
Conclusions

A final thought

Exercises
